## ABSTRACT

The *2001 Energy Technology Export Directory* has been prepared as part of the California Energy Commission Energy Technology Export Program. A principal objective of this program is to assist the California energy technology industry in promoting its goods and services worldwide. This directory provides a list of 558 California-based energy technology companies. Also included is a brief description of the products and/or services offered by each company.

Intended primarily for use by potential buyers of California-based energy technology equipment and services, the 2001 Energy Technology Export Directory of California Companies was revised to include companies serving the financial and legal needs of California energy companies pursuing international markets.

This directory does not necessarily represent the views of the California Energy Commission, its employees or the State of California. Neither the Energy Commission, the State of California, nor any of their employees, contractors, and subcontractors make any warranty, expressed or implied, or assumes any legal liability for the information in this directory; nor does any party represent that the use of this information will not infringe upon privately owned rights.

# 2001 Energy Technology Export Directory of California Companies

## Introduction

### Overview

The *2001 Energy Technology Export Directory of California Companies* (*Export Directory*) has been prepared as part of the California Energy Commission's Energy Technology Export Program. A principal objective of the program is to assist the California energy technology industry, especially small- and medium-sized businesses, in worldwide promotion of their goods and services. This directory provides a listing of 558 California-based companies interested in exporting their energy-related products and services to the international marketplace. Included are brief descriptions of the products or services offered by these companies. The directory is intended for use by potential overseas buyers of California energy technologies and other interested parties.

The *2001 Export Directory* (eighth edition) has been produced after an extensive survey conducted during the spring of 2001. This survey covered a wide variety of energy technology companies in California and was based on numerous sources such as industry association mailing lists, product directories and energy technology mailing lists.

The directory is distributed to potential international customers, overseas representatives of the United States government, and overseas California government representatives by the Energy Technology Export Program staff. It is often requested by international visitors participating in reverse trade missions, technical exchange missions, and international visitor briefings arranged by the Export Program to introduce California energy technology companies to the international market.

A CD version of the *2001 Export Directory* will be available in July 2001. There will also be an interactive electronic version of the directory available August 2001 on the Commission's web site at: [www.energy.ca.gov/export/](http://www.energy.ca.gov/export/).

If your company is not listed and you want to be included in the next edition, please complete the information form in the appendix and fax the form to us.

### Organization

The Export Directory is organized into four sections:

- **Section 1, the Introduction**, presents the overview and organization of the directory.
- **Section 2, the Company Listing**, gives the company name and address, contact person, telephone numbers, and a brief description of the products or services offered.

- **Section 3, the Company Matrix,** identifies the technology or service in which a company is involved. The Company Matrix is an alphabetical listing of all companies listed in the directory.
- **Section 4, the Energy Technology Matrices,** contains individual technology matrices summarizing the types of products or services offered by companies dealing in these technologies. Some companies offering products or services in more than one energy technology may be listed in several technology matrices.

In Section 4, the following energy technology matrices are alphabetically listed:

- Biomass
- Coal
- Cogeneration
- Electric Vehicles
- Energy Efficiency
- Environmental
- Financial Services
- Geothermal
- Hydroelectric (Small-scale)
- Natural Gas
- Petroleum
- Photovoltaics
- Solar Thermal
- Wind

### **How to use the Directory**

Potential purchasers of energy technology products and services and other interested parties will benefit from using this directory as a guide to locating over 500 California companies providing specific products and services.

When searching for information on a *known company*, use the Alphabetical Company Listing. When looking for the producer of a *specific product or service*, use the Company Matrix listing along with the Energy Technology Matrices.

No attempt was made to screen companies according to their reputation, quality of products or services offered, or other such criteria. Potential buyers using this directory should exercise prudent judgment in determining whether the companies listed in the directory can provide products and services in a manner acceptable to the buyer. *The listing of a company in this directory does not constitute an endorsement or recommendation by the California Energy Commission.*

For a free copy of this directory, please contact Brenda Sturdivant by telephone at (916) 654-4708, or fax (916) 653-8251, or write: Energy Technology Export Program, California Energy Commission, 1516 Ninth Street, MS-45, Sacramento, CA 95814.

*BPS supplies the Turbogen (TM) power generating system combines proven technologies with flexible controls to provide cogeneration solutions that efficiently and cost effectively produce combined heat and power (CHP) at the point of energy consumption.*

*BPS delivers CHP solutions with efficiencies greater than 80% along with improved power quality, increased power availability and reduced emissions.*

*Our proprietary core technologies include:*

- high speed electrical generators*
- power conditioning electronics*
- control and applications software*
- sub-system components including gas-boost compressors*

*We couple these unique enabling technologies with microturbine engines from the industry's leading supplies to create TURBOGEN (TM). BPS offers a unique range application that can operate in grid-connect island operation and in-parallel (load share) modes while providing clean superior quality.*

*Engine, Fuel and Emissions Engineering, Inc. (EF&EE) is an engineering and consulting firm specializing in the measurement and control of air pollutant emissions from motor vehicles and other mobile sources, as well as conventional and alternative fuels and air quality issues worldwide. In a series of projects for the World Bank, EF&EE staff have literally "written the book" on strategies for controlling motor vehicle emissions in developing countries, and have helped to apply these strategies in cities from Bangkok to Buenos Aires. In the U.S., EF&EE and its professional staff have played important roles in the phaseout of leaded gasoline, development and reevaluation of present diesel emission control strategies, and development of technologies and emission regulations for natural gas vehicles.*

*HDR is nationally known for its contribution to the field of energy conservation in municipal treatment facilities. In addition to having performed audits at water and wastewater facilities, HDR has served as an ongoing consultant to major utilities, the U.S. EPA, and the Electric Power Research Institute (EPRI). HDR focuses on making zero cost and low cost energy improvements, rather than expensive retrofits. Using our knowledge of plant processes, we are able to manipulate them, rather than to simply change out expensive equipment.*

*Solatube International Inc. is the innovator of the tubular skylight, a revolutionary daylighting product for residential and commercial applications. A patented reflective system located inside a rooftop dome collects and redirects light down a highly reflective tube to a diffuser at ceiling. Solatube's Brighten Up Series includes 10- and 14- inch units, which are ideal for residential and smaller commercial spaces. The SolaMaster Series, featuring the flagship 21-inch unit, was designed with large spaces in mind, and offers a unique daylighting option for commercial buildings and larger areas of the home. Another Solatube energy-efficient product is Solar Star, a solar-powered attic fan.*
